Technology
that opens your eyes
to the moment.

The Science to Connect You to the Moment

PPG Optical Materials created Trivex® lens material to ensure you get the best performance from your lenses, better connecting you to each moment. Clear, lightweight and strong, the technology behind Trivex® material ensures you get the most from your lenses.

Clear Vision:

When you wear Trivex® lenses your vision is incredibly crisp and crystal clear so that you never miss a moment. Whether you're driving in your car or playing soccer with friends, Trivex® lenses can help to reduce eyestrain and bring clarity to your world.

Lightweight Comfort:

Trivex® lenses are extremely light and thin to provide all-day comfort. The lightest prescription lens material on the planet, Trivex® material ensures that your lenses will be the last thing weighing you down.

Strength & Protection:

Built to be durable and strong, Trivex® lenses can handle whatever life brings their way. So if they are buried at the bottom of a carry-on bag or are hit with a rock during a long hike, Trivex® lenses are strong enough to handle it and continue to perform.

And every Trivex® lens - clear or tinted - protects your eyes by blocking 100 percent of harmful UV rays.

Never Compromise

Durable and strong or lightweight comfort? Remarkable clarity or thinness? With Trivex® lens material, you don't have to choose or compromise. You receive all the product benefits of Trivex® lenses in any style, or with any additional options you need.

Trivex® lenses are also versatile enough to fit the majority of eyeglass prescriptions with an extremely thin lens. Ask your eye care professional if Trivex® lenses are the right fit for you.

Enhancing Trivex® Lens Material

Design

Trivex® lens material serves as the ultimate foundation to customize and improve your eyewear. It is fully compatible with the newest digital HD lens technology for enhanced vision. And Trivex® lenses can be used in any frame design and are ideal for rimless and semi-rimless styles.

Additional Lens Features

You expect and deserve a lot from your lenses. Trivex® material is available with many additional features like glare-free (anti-reflective) coatings, photochromic Transitions® lenses and polarized lenses.
